Practical – V

Roll No.: T047	Name: Ashwin Tripathi
Class: TYIT	Batch:1
Date of Assignment: 19-08-26	Date/Time of Submission: 19-08-26

d. Fetch sample data from a public API using Axios.

Code :

App.jsx

```
import axios from "axios";
```

```
import { useEffect, useState } from "react";
```

```
function App() {
```

```
  const [products, setProducts] = useState([]);
```

```
  useEffect(() => {axios.get("https://dummyjson.com/products")
```

```
    .then((response) => {
```

```
      setProducts(response.data.products);
```

```
    })), []);
```

```
  return (
```

```
    <div>
```

```
      <h1>Product List</h1>
```

```
      <hr />
```

```
      {products.map((product) => (
```

```
        <div key={product.id}>
```

```
          <h2>{product.title}</h2>
```

```
          <p>Price: $ {product.price}</p>
```

```
        </div>
```

```
      )}
```

```
    </div>
```

```
  );
```

```
}
```

```
export default App;
```

Output :

Product List	
Essence Mascara Lash Princess	Price: \$9.99
Eyeshadow Palette with Mirror	Price: \$19.99
Powder Canister	Price: \$14.99
Red Lipstick	Price: \$12.99
Red Nail Polish	Price: \$8.99

e. Display fetched data in table or list format.

Code :

```
import axios from "axios";
import { useEffect, useState } from "react";

function App() {
  const [products, setProducts] = useState([]);

  useEffect(() => {
    axios
      .get("https://dummyjson.com/products")
      .then((response) => {
        setProducts(response.data.products);
      });
  }, []);

  return (
    <div>
      <h1>Product List</h1>
      <hr />

      <table border="1" cellPadding="10">
        <thead>
          <tr>
            <th>ID</th>
            <th>Product Name</th>
            <th>Category</th>
            <th>Price</th>
            <th>Rating</th>
            <th>Stock</th>
          </tr>
        </thead>

        <tbody>
          {products.map((product) => (
            <tr key={product.id}>
```

```

        <td>{product.id}</td>
        <td>{product.title}</td>
        <td>{product.category}</td>
        <td>${product.price}</td>
        <td>{product.rating}</td>
        <td>{product.stock}</td>
    </tr>
    )))
</tbody>
</table>
</div>
);
}

```

export default App;

Output :

Product List					
ID	Product Name	Category	Price	Rating	Stock
1	Essence Mascara Lash Princess	beauty	\$9.99	2.56	99
2	Eyeshadow Palette with Mirror	beauty	\$19.99	2.86	34
3	Powder Canister	beauty	\$14.99	4.64	89
4	Red Lipstick	beauty	\$12.99	4.36	91
5	Red Nail Polish	beauty	\$8.99	4.32	79
6	Calvin Klein CK One	fragrances	\$49.99	4.37	29
7	Chanel Coco Noir Eau De	fragrances	\$129.99	4.26	58
8	Dior J'adore	fragrances	\$89.99	3.8	98
9	Dolce Shine Eau de	fragrances	\$69.99	3.96	4
10	Gucci Bloom Eau de	fragrances	\$79.99	2.74	91
11	Annibale Colombo Bed	furniture	\$1899.99	4.77	88

f. Implement search or filter functionality on displayed data.

Code :

```

import axios from "axios";
import { useEffect, useState } from "react";

function App() {
  const [products, setProducts] = useState([]);
  const [category, setCategory] = useState("all");

  useEffect(() => {
    axios
      .get("https://dummyjson.com/products")

```

```

        .then((response) => {
            setProducts(response.data.products);
        });
    }, []);

const filteredProducts =
    category === "all"
    ? products
    : products.filter((product) => product.category === category);

return (
    <div>
        <h1>Filter Products</h1>

        <select
            value={category}
            onChange={(e) => setCategory(e.target.value)}
        >
            <option value="all">All Products</option>
            <option value="beauty">Beauty</option>
            <option value="fragrances">Fragrances</option>
            <option value="furniture">Furniture</option>
            <option value="groceries">Groceries</option>
        </select>

        <hr />

        {filteredProducts.map((product) => (
            <div key={product.id}>
                <h2>{product.title}</h2>
                <p>Category: {product.category}</p>
                <p>Price: $ {product.price}</p>
                <hr />
            </div>
        ))}
    </div>
);
}

export default App;
Output :

```

4.e Display a list of items stored in the sales using map().

Code :

App.jsx

```
import { useState } from "react";
import "./App.css";
```

```
function App() {
  const [movies] = useState([
    {
      id: 1,
      name: "Avengers: Endgame",
      genre: "Action",
      rating: 9.0
    },
    {
      id: 2,
      name: "3 Idiots",
      genre: "Comedy",
      rating: 8.4
    },
    {
      id: 3,
      name: "Interstellar",
      genre: "Sci-Fi",
      rating: 8.7
    },
  ]
}
```

```

    id: 4,
    name: "Dangal",
    genre: "Sports Drama",
    rating: 8.3
  },
  {
    id: 5,
    name: "The Dark Knight",
    genre: "Action",
    rating: 9.0
  }
]);

```

```

return (
  <div className="app">
    <h1> 🎬 Movie Watchlist</h1>

    <div className="movie-container">
      {movies.map((movie) => (
        <div className="movie-card" key={movie.id}>
          <h2> {movie.name}</h2>

          <p>
            <strong>Genre:</strong> {movie.genre}
          </p>

          <p>
            <strong>Rating:</strong> ⭐ {movie.rating}/10
          </p>
        </div>
      ))}
    </div>
  </div>
);
}

```

export default App;

Output :

Movie Watchlist

Avengers: Endgame

Genre: Action

Rating: ★ 9/10

3 Idiots

Genre: Comedy

Rating: ★ 8.4/10

Interstellar

Genre: Sci-Fi

Rating: ★ 8.7/10

Dangal

Genre: Sports Drama

Rating: ★ 8.3/10

The Dark Knight

Genre: Action

Rating: ★ 9/10
